

MyWebCreator is an easy to use browser-based web content management and website builder application. Incorporating a complete online WYSIWYG editor that enables users to create, edit and update their website, from anywhere at anytime.

mywebcreator
point and click site manager

A professional website ready to edit Using a pre-structured MyWebCreator template, designed and built specifically for you, easily edit and maintain a professional looking site.

Save time and money No need to pay for expensive web developers and no more waiting for your webmaster to make your required updates. Use the powerful, fully functional and professional MyWebCreator software to make changes, quickly and easily.

Manage your entire website MyWebCreator allows you to manage your website with ease using the file and image managers provided. Multiple user support allows for up to four users to manage and update the content of different sections of your site.

Make updates anywhere, anytime Remove all the hassles associated with organising others to make your required changes, simply make the changes yourself. Login through Microsoft Internet Explorer and you can update and modify the pages of your site as you see fit. Edit your site from the office, home, laptop or from any computer anywhere in the world!

Easy and powerful editing Unparalleled, easy to use and powerful online WYSIWYG (What You See Is What You Get) editor. Using your customised MyWebCreator templates and style sheets, you are able to create and edit professional HTML pages in a matter of minutes, without actually having any knowledge of HTML. It's as easy as using Microsoft Word.

Create and modify tables, forms, text boxes, radio buttons, check boxes and buttons. Point and click to import text and upload images from any PC to your site.

Automatic content driven menus Avoid the hassles of lost pages. As soon as you create a page it automatically appears in your site menu. No need to waste time editing menu structures, MyWebCreator provides a dynamic site builder. You can turn pages on and off in seconds, so they either appear or hide from your site. Sites are easily customised to display either side or top drop down menu styles.

Powerful spell checking MyWebCreator comes complete with a sophisticated spell checker that supports American, British or Canadian English, French, Spanish, German, Italian, Portuguese, Dutch, Norwegian, Swedish or Danish languages.

Create secure pages Secure pages and areas of your site using the unique MyWebCreator Security System. Each template provides you with the opportunity to secure pages for multiple groups of users with varying access levels. Your site can be open to the world and yet have exclusive areas for your members via user name and password (managed by the SQL back-end database).

Website Hosting MyWebCreator sites are hosted on secure Linux servers running Apache and are entirely backed-up to dat-tape every day. For further security, a minimum of one week's back-up tapes are stored off-premises. Your site runs on extremely fast servers incorporating Raid-5 multiple drive configuration and is connected to the internet via our
